

CS-4981 Deep Learning In Signal Processing					
Fall, 2022					
Draft Outline					
Week	Day 1	Lab	Day 2	Project Milestones	
1	(holiday)	5%: Get a Rosie account; MATLAB Deep Learning Toolbox; Run "Get Started" Examples	Course Introduction; DL Intro: classification/regression, loss functions: binary cross-entropy/MSE, deep networks, backpropagation		
2	DSP Intro: Signal types (audio, position/acceleration, image, video, ...), Nyquist, sampling, quantization, LTI (linear, time-invariant) systems and difference equations, detection/ enhancement/ denoising	10%: MATLAB on Rosie: Choice of signal representation /classification or transfer learning	DL: The training pipeline, optimization algorithms (SGD, ADAM), overfitting/generalization		
3	DSP: system response, convolution, as projection onto basis functions (linear algebra)	10%: Model pruning in MATLAB on Rosie	DL: Confusion matrices (accuracy, precision, recall, etc.), fully connected layers (FC), activations (nonlinear), NN as robust function approximation	5%: Topic Selection, Identify 3+ References	
4	DSP: frequency content and response, Discrete Fourier Transform (DFT), FFT	10%: Hyperparameter optimization in MATLAB on Rosie	DL: Convolutional layers (conv1d, etc.); pooling layers; basic network structures		
5	DSP: spectrograms and windowing	Project work	DL: Layers for robustness: dropout, batchnorm	15% Background Paper: Summarize references, propose implementation approach (data source, outline work to be done)	
6	DSP: inverting the spectrogram, perfect reconstruction	Project work	DL: Perceptual error measures and backprop.	10% Preliminary results, updated work plan	
7	(class cancelled)	Project work	DL: Autoencoders	10% Presentation Draft: Slides and notes, mostly complete, final results may be pending	
8	DSP Filter design using window method	Project Presentations			
9				(class cancelled)	10% Presentation execution
10					15% Writeup of final results
11	Finals Week
